IT4070 - Preparing for Professional World

PROFESSIONAL PORTFOLIO

Dilina Jayalath Academic and Career Portfolio

This portfolio brings together my self-introduction, reflective journal for PPW, career development plan, curriculum vitae, and course-evidence section in a format prepared for final PDF export.

BSc (Hons)

Information Technology specializing in Software Engineering at SLIIT

3.38 / 4.0

CGPA recorded in the current curriculum vitae

1 year

Software Engineering internship completed at Irusri Group

INTRODUCTION

Introduction to myself

I am Dilina Jayalath, a Software Engineering undergraduate at SLIIT with a strong interest in turning ideas into useful digital products. I am especially motivated by work that combines clear interface design, structured implementation, and practical value for users.

My academic and personal projects have helped me develop confidence in Java, JavaScript, React, Python, PHP, Kotlin, and database-backed applications. Completing a one-year Software Engineering internship at Irusri Group also gave me valuable exposure to professional teamwork, delivery expectations, and applied software development beyond the classroom.

I see myself as a learner who is becoming increasingly professional in the way I plan, present, and evaluate my work. This portfolio reflects not only what I have built so far, but also how I am preparing for the professional world.

Professional identity

I am a software engineering undergraduate who enjoys building practical digital products and improving how they are experienced by real users. My interests sit at the intersection of frontend development, full-stack implementation, and AI-supported problem solving.

Working style

I work best when a task requires both structure and adaptability: understanding requirements, organizing the solution clearly, and refining the final output until it feels dependable and polished.

What I bring

My academic work, self-learning, and one-year Software Engineering internship at Irusri Group have given me confidence with React, Java, JavaScript, Python, Kotlin, and databases. I also bring persistence, willingness to learn quickly, and a strong sense of responsibility for the quality of my work.

REFLECTIVE JOURNAL

What I learned from IT4070 - Preparing for Professional World

PPW helped me connect academic learning with professional readiness. The most important lesson was that career development is not only about technical knowledge, but also about reflection, communication, self-awareness, and consistent professional habits.

ENTRY 01

PPW taught me that employability is broader than technical skill

Before studying Preparing for Professional World, I mostly measured progress by coding ability and completed projects. The module made me recognize that employers also look at communication, professionalism, initiative, time management, and the ability to present work clearly. That shift helped me see career preparation as a continuous process rather than something to think about only when applying for jobs.

↳ HOW THIS CHANGED ME

Because of this, I now pay more attention to how I explain my ideas, document my work, and present myself through my CV, GitHub profile, and professional conversations.

ENTRY 02

I learned how reflection improves professional growth

A major value of PPW was learning to examine my strengths and gaps honestly. Reflecting on my learning habits showed me that I am comfortable with implementation, but I need to keep improving interview confidence, networking, and the way I communicate achievements without underselling them. Reflection turned those weaknesses into action points instead of vague concerns.

↳ HOW THIS CHANGED ME

This made me more intentional about setting goals, tracking progress, and linking each academic activity to the professional capability it develops.

ENTRY 03

Professional communication is a skill I must keep practicing

PPW reinforced that technical knowledge has limited value if it cannot be shared effectively. Writing CV content, organizing evidence, preparing career plans, and thinking about workplace expectations showed me that clarity, respect, and confidence are essential in team environments. Good communication supports collaboration, trust, and better outcomes.

↳ HOW THIS CHANGED ME

As a result, I want to keep strengthening presentation skills, interview responses, email etiquette, and the habit of tailoring communication to different audiences.

ENTRY 04

Career planning works best when it is specific and realistic

The module also helped me connect long-term ambition with immediate action. Instead of having a general idea about becoming a software engineer, I now think in stages: strengthen technical depth, gain industry exposure, improve professional presence, and build evidence that demonstrates growth. This makes my career development plan more practical and measurable.

↳ HOW THIS CHANGED ME

I now approach my future with clearer priorities: graduate strongly, secure meaningful experience, and continue building a portfolio that reflects both skill and professional maturity.

CAREER DEVELOPMENT PLAN

A structured path from student to professional engineer

My goal is to grow into a software engineer who combines strong implementation skills with clear communication, reliability, and continuous learning. The plan below breaks that ambition into realistic stages.

NEXT 12 MONTHS

Graduate readiness

- Complete my academic work strongly while maintaining or improving my performance.
- Strengthen React, Java, Python, database, and problem-solving ability through consistent project work.
- Use my completed one-year internship experience as proof of readiness while preparing for entry-level software engineering opportunities with a sharper CV, portfolio, and interview practice routine.

Target outcome: enter the job market with a stronger public portfolio and clear evidence of technical readiness.

1 TO 3 YEARS

Early-career growth

- Work in a software engineering role where I can contribute to production-level features and learn from stronger engineering processes.
- Deepen knowledge in frontend architecture, backend integration, APIs, testing, and deployment workflows.
- Build confidence in professional communication, teamwork, code review, and responsibility within real delivery environments.

Target outcome: become a dependable associate or junior engineer with broad full-stack exposure.

3 TO 5 YEARS

Specialization and impact

- Develop into a full-stack engineer who can take ownership of larger features from planning to deployment.
- Specialize further in product-focused web development while continuing to explore AI-enabled applications.
- Contribute ideas more confidently, mentor where possible, and build software that solves meaningful user problems.

Target outcome: be recognized for both technical contribution and professional reliability.

CAREER TARGET

Associate Software Engineer leading toward full-stack growth

I want to begin in a role where I can contribute to real product work, sharpen engineering discipline, and build from strong foundations rather than rushing toward titles without experience.

Technical development

- Advanced React and modern frontend architecture
- Backend design with Java, Node.js, and databases
- Problem solving, testing, and deployment discipline

Professional development

- Interview preparation and confidence under pressure
- Professional writing, presentations, and teamwork communication
- Portfolio, GitHub, and LinkedIn consistency

Personal development

- Time management and prioritization
- Lifelong learning through short courses and certifications
- Resilience, accountability, and growth mindset

CURRICULUM VITAE

Curriculum vitae summary

This section summarizes the key information from my CV, while the full resume remains available as a downloadable PDF.

Profile

Motivated Software Engineering undergraduate with a solid academic base and growing practical experience in web development, Java, React, Python, and Kotlin, including a completed one-year Software Engineering internship at Irusri Group. I enjoy building useful applications, learning quickly, and contributing to teams with discipline, adaptability, and curiosity.

Education

BSc (Hons) in Information Technology specializing in Software Engineering

Sri Lanka Institute of Information Technology (SLIIT)

CGPA: 3.38 / 4.0 as stated in the current CV

Experience

Software Engineering Intern

COMPANY SITE

Irusri Group

Completed a one-year internship in software engineering, gaining hands-on exposure to professional development practices, teamwork, and real-world product delivery.

Skills

PROGRAMMING

C/C++ | JAVA | JAVASCRIPT | PHP | SQL | KOTLIN | PYTHON

WEB AND FRAMEWORKS

REACT.JS | HTML | CSS | NODE.JS | EXPRESS

DATABASES AND TOOLS

MONGODB | MYSQL | APACHE TOMCAT | ECLIPSE IDE | GITHUB

Selected projects

Communication and Stationery Management System

Handled the promotion and coupon module in a MERN stack system, including coupon creation, updating, deletion, reporting, filtering, search, and discount application workflows.

Stock Management System

Developed stock management functionality with individualized user logins and CRUD operations using HTML, CSS, JavaScript, Java, JSP/Servlets, and Apache Tomcat.

Online Land Selling System

Designed and implemented the homepage, land-selling functionality, and user dashboard using HTML, CSS, JavaScript, and PHP.

Certifications and courses

- Introduction to Cybersecurity - Cisco
- Cybersecurity Essentials - Cisco
- Python for Beginners - University of Moratuwa

Detailed references remain in the attached CV PDF rather than being displayed publicly on the portfolio page.

PDF SUBMISSION

Final export and submission guide

This page is designed so the browser print dialog can be used to generate the final PDF. Before exporting, add the actual course certificate file to the evidence panel so the portfolio fully matches the marking rubric.

- Introduction to yourself is included as a dedicated section.
- Reflective journal content covers learning from IT4070 - Preparing for Professional World.
- Career development plan is organized by short-term, mid-term, and long-term action.
- Curriculum vitae content is summarized in the portfolio and linked as a PDF.
- A certificate evidence section is prepared for insertion before final export.
- The page is formatted so it can be exported through the browser as a PDF.

EXPORT TIPS

Choose Save as PDF in the print dialog.

Use portrait layout for a more traditional report style.

Keep margins at default or minimum depending on readability.

Enable background graphics if you want the full visual styling.
