SRI LANKA

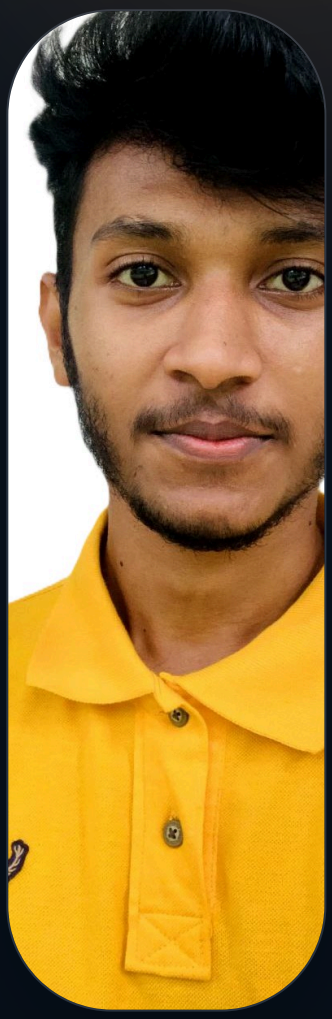
Dilina Jayalath

Software Engineering Undergraduate

Academic and Career Portfolio

Software engineering undergraduate focused on practical web development, AI-supported problem solving, and professional growth.

React | Java | Python | Full Stack



ABOUT ME

Curious, practical, and career focused.

I am a Software Engineering undergraduate at SLIIT with a strong interest in turning ideas into useful digital products. My work combines clear interface design, structured implementation, and practical value for users.

My academic projects and internship experience have helped me grow in React, Java, JavaScript, Python, Kotlin, and database-backed application development.

1. Professional identity

I am a software engineering undergraduate who enjoys building practical digital products and improving how they are experienced by real users. My interests sit at the intersection of frontend development, full-stack implementation, and AI-supported problem solving.

2. Working style

I work best when a task requires both structure and adaptability: understanding requirements, organizing the solution clearly, and refining the final output until it feels dependable and polished.

3. What I bring

My academic work, self-learning, and one-year Software Engineering internship at Irusri Group have given me confidence with React, Java, JavaScript, Python, Kotlin, and databases. I also bring persistence, willingness to learn quickly, and a strong sense of responsibility for the quality of my work.

SKILLS

Technical toolkit.

React.js	88%
JavaScript	86%
Java	82%
Python	80%
Node.js	76%
SQL	74%
Kotlin	70%
MongoDB	68%

Technical development

Advanced React and modern frontend architecture
Backend design with Java, Node.js, and databases
Problem solving, testing, and deployment discipline

Professional development

Interview preparation and confidence under pressure
Professional writing, presentations, and teamwork communication
Portfolio, GitHub, and LinkedIn consistency

Personal development

Time management and prioritization
Lifelong learning through short courses and certifications
Resilience, accountability, and growth mindset

EXPERIENCE

Industry exposure and delivery practice.

1

Software Engineering Intern

Irusri Group

Completed a one-year internship in software engineering, gaining hands-on exposure to professional development practices, teamwork, and real-world product delivery.

PROJECTS

Selected academic and practical work.

Communication and Stationery Management System

Handled the promotion and coupon module in a MERN stack system, including coupon creation, updating, deletion, reporting, filtering, search, and discount application workflows.

Stock Management System

Developed stock management functionality with individualized user logins and CRUD operations using HTML, CSS, JavaScript, Java, JSP/Servlets, and Apache Tomcat.

Online Land Selling System

Designed and implemented the homepage, land-selling functionality, and user dashboard using HTML, CSS, JavaScript, and PHP.

CERTIFICATIONS & EDUCATION

Credentials and learning milestones.

Education

BSc (Hons) in Information Technology specializing in Software Engineering

Sri Lanka Institute of Information Technology (SLIIT)

CGPA: 3.38 / 4.0 as stated in the current CV

Python for Beginners

Certifications

- Introduction to Cybersecurity - Cisco
- Cybersecurity Essentials - Cisco
- Python for Beginners - University of Moratuwa

Cybersecurity Essentials

Introduction to Cybersecurity

REFLECTIVE JOURNAL

Academic reflection.

PPW taught me that employability is broader than technical skill

Before studying Preparing for Professional World, I mostly measured progress by coding ability and completed projects. The module made me recognize that employers also look at communication, professionalism, initiative, time management, and the ability to present work clearly. That shift helped me see career preparation as a continuous process rather than something to think about only when applying for jobs.

I learned how reflection improves professional growth

A major value of PPW was learning to examine my strengths and gaps honestly. Reflecting on my learning habits showed me that I am comfortable with implementation, but I need to keep improving interview confidence, networking, and the way I communicate achievements without underselling them. Reflection turned those weaknesses into action points instead of vague concerns.

Professional communication is a skill I must keep practicing

PPW reinforced that technical knowledge has limited value if it cannot be shared effectively. Writing CV content, organizing evidence, preparing career plans, and thinking about workplace expectations showed me that clarity, respect, and confidence are essential in team environments. Good communication supports collaboration, trust, and better outcomes.

Career planning works best when it is specific and realistic

The module also helped me connect long-term ambition with immediate action. Instead of having a general idea about becoming a software engineer, I now think in stages: strengthen technical depth, gain industry exposure, improve professional presence, and build evidence that demonstrates growth. This makes my career development plan more practical and measurable.

CAREER PLAN

Roadmap toward professional growth.

1

NEXT 12 MONTHS

Graduate readiness

Complete my academic work strongly while maintaining or improving my performance.
Strengthen React, Java, Python, database, and problem-solving ability through consistent project work.
Use my completed one-year internship experience as proof of readiness while preparing for entry-level software engineering opportunities with a sharper CV, portfolio, and interview practice routine.

2

1 TO 3 YEARS

Early-career growth

Work in a software engineering role where I can contribute to production-level features and learn from stronger engineering processes.
Deepen knowledge in frontend architecture, backend integration, APIs, testing, and deployment workflows.
Build confidence in professional communication, teamwork, code review, and responsibility within real delivery environments.

3

3 TO 5 YEARS

Specialization and impact

Develop into a full-stack engineer who can take ownership of larger features from planning to deployment.
Specialize further in product-focused web development while continuing to explore AI-enabled applications.
Contribute ideas more confidently, mentor where possible, and build software that solves meaningful user problems.

CV

Profile summary.

Curriculum Vitae

Motivated Software Engineering undergraduate with a solid academic base and growing practical experience in web development, Java, React, Python, and Kotlin, including a completed one-year Software Engineering internship at Irusri Group. I enjoy building useful applications, learning quickly, and contributing to teams with discipline, adaptability, and curiosity.

- Software Engineering Undergraduate
- 1 Year Internship Experience
- React, Java, Python, Kotlin
- Full-stack Web Development
